D.J. PARIS

YOUR VIDEO GETS 0.4 SECONDS.

That's the whole window before someone decides to keep watching or scroll past.

AT ZILLOW UNLOCK, META'S OWN TEAM SAID VIEWERS DECIDE TO KEEP WATCHING OR SCROLL WITHIN FOUR TENTHS OF A SECOND.

Your name hasn't even finished by then.

03 / 05

THE FIX ISN'T A BETTER VIDEO. IT'S A BETTER FIRST FRAME.

Meta's Claire Bauman and Mina Khan, at Zillow Unlock 2026: viewers decide almost instantly, within 0.4 seconds, whether to keep watching. They also flagged that roughly 60% of viewing attention stays in the center of the frame, away from the platform's own buttons. Put those two together and the lesson is specific: skip the hello and your name, open on what the viewer actually cares about, and keep your face in the middle of the shot.

FIX YOUR NEXT VIDEO BEFORE YOU FILM IT:

1 **Cut the hello and your name.**
Open on frame one with the point, not the warm-up.

2 **Lead with what the viewer cares about.**
Not what you want to tell them first.

3 **Keep your face centered in the frame.**
That's where the attention actually sits.

4 **Pull up your last video and watch the first second.**
If it's a greeting, that view was already gone before you said anything useful.

THE TAKEAWAY

YOU DON'T GET A WARM-UP. YOU GET FOUR TENTHS OF A SECOND.

Spend it on the point, not the hello.
