

KALE REALTY

NEW CONSTRUCTION SAVES \$1,002 A YEAR IN INSURANCE.

That's the line buyers never see on your CMA.

“

**A NEWLY BUILT
HOME'S
INSURANCE
PREMIUM RUNS 35
PERCENT LOWER
THAN A
20-YEAR-OLD
HOME'S.**

Over a decade, that's about \$7,300 back in a buyer's pocket.

THE STICKER PRICE IS NOT THE WHOLE COST COMPARISON.

Realtor.com's 2026 analysis found the average annual home insurance premium on a newly built home ran 35 percent lower than on a 20-year-old home, a savings of about \$1,002 a year and roughly \$7,300 over the first decade. Newer wiring, newer roofs, and current building codes mean fewer claims, and insurers price that in before a buyer ever asks. A buyer weighing a new build against an older home is not just comparing purchase price. They're comparing two different insurance bills for as long as they own the place.

WHAT TO ADD TO EVERY NEW-CONSTRUCTION CONVERSATION THIS MONTH:

- 1 Ask for an insurance quote before the offer, not after.**
A same-day quote on both properties turns an abstract number into a real one.
- 2 Put the annual premium gap on the comparison sheet.**
Buyers weigh a \$1,002-a-year difference the same way they weigh a monthly payment.
- 3 Say the ten-year number out loud.**
\$7,300 over a decade reframes a sticker-price hesitation into a total-cost decision.

THE TAKEAWAY

THE LOWER INSURANCE BILL DOESN'T SHOW UP ON THE LISTING.

It shows up on the buyer's decision, if you bring it up first.
