

**KEEPING IT REAL**

# AI ISN'T REPLACING AGENTS. IT'S REPLACING **MARKETING.**

---

A Chicago producer in the top 0.001% of agents on what AI actually threatens.

“

**"AI ISN'T  
REPLACING REAL  
ESTATE AGENTS.  
IT'S REPLACING  
AVERAGE  
MARKETING."**

Carrie McCormick, Carrie McCormick Group, at  
properties Christie's International, Chicago.

## "WHEN INFORMATION BECOMES FREE, **JUDGMENT** BECOMES PRICELESS."

Carrie's point: AI can already answer what a buyer used to ask an agent, the comps, the neighborhood, the price range. What it can't do is know there was a telephone pole behind one of those "closest five homes," or that a property sold at a discount because of mold in the basement. That local, lived knowledge is what turns a data answer into a judgment call, and it's the part of the job AI doesn't reach.

# HER THREE PREDICTIONS THAT CHANGE WHAT YOU POST:

## **1 Lifestyle is going to outperform square footage as a value driver.**

Post the neighborhood paired with the buyer it fits, and say why, instead of another square-footage headline.

## **2 Hyper-local expertise becomes one of the most valuable assets in the business.**

When a buyer asks AI who the best agent for a neighborhood is, that answer needs your name already attached to it somewhere online.

## **3 The best agents become small media companies and educators.**

Carrie's own words: an agent who isn't building content isn't providing value, and AI surfaces the agents who are.

## THE TAKEAWAY

**AI CAN ANSWER  
THE MARKET. IT  
CAN'T BE THE  
TRUSTED ADVISOR.**

Be the one thing it can't replace.
